SUMMARY

Frontend Developer with strong experience in React, JavaScript (ES6), HTML5, and CSS/CSS3. Proficient in building responsive layouts using Flexbox and Grid. Skilled in Tailwind CSS for modern, scalable UI development. Familiar with component-based architecture, reusable code, and modern frontend best practices.

TECHNICAL SKILLS

Front End	React JS (Hooks, Components, useEffect, RESTAPI, State Management, Routing, etc.,
Languages	HTML5, CSS/CSS3, JavaScript, ES6 Features
Styling	Tailwind CSS
Layout	Flexbox and CSS Grid, Responsive web designing
Tools	Git and Github, VS code, NPM, Figma

Key Responsibilities:

- Developed and maintained responsive web applications using React.js, HTML5, CSS3, and JavaScript (ES6).
- Built reusable, component-based UI structures to improve code maintainability and scalability.
- Implemented modern layouts using Flexbox and CSS Grid to ensure cross-device compatibility.
- Styled applications using Tailwind CSS for consistent and efficient UI development.
- Integrated REST APIs and handled dynamic data rendering in React components.
- Collaborated with designers and backend teams to translate UI/UX designs into functional interfaces.
- Debugged, tested, and optimized frontend code to improve performance and user experience.

Experience/Internship Training :

HCL Guvi **JAN-26 to APR-26**

Public Holiday Finder Application: **(Jan-26 – Feb-26)** **Team: 5**

Project Description:

Developed a responsive web application that allows users to search and view public holidays by selecting a specific country and year. The application dynamically fetches holiday data from a public API and displays detailed information including holiday name, date, day of the week, country code, and type. It also provides functionality to export the results as a CSV file and stores user search history using browser local storage.

Tech Stack:

HTML5, CSS3, React.js, Tailwind CSS, REST APIs, React Router, Responsive Web Design

Roles & Responsibilities

- Designed and developed reusable UI components using React.js and Tailwind CSS.
- Implemented client-side routing using React Router for seamless navigation.
- Integrated REST APIs using Fetch API / Axios to dynamically retrieve country and holiday data.
- Built search functionality to filter holidays by country and year with real-time updates.
- Implemented Dark/Light mode toggle with theme persistence using LocalStorage.
- Developed CSV export functionality to allow users to download holiday data.
- Managed application state efficiently for handling API data and user interactions.
- Implemented search history tracking using LocalStorage to enhance user experience.
- Ensured fully responsive design and optimized UI behaviour across devices.
- Structured the application using a component-based architecture for scalability and maintainability.

2. **Real-Time Customer Support Ticketing System** **(jan-26 – Mar-26)** **Team Size: 4**

Project Description:

- Developed a web-based customer support ticketing system used by support agents and managers to handle customer issues raised through multiple channels such as web forms and email.
- The system allows users to create tickets, assign priority, track ticket status, and manage resolution timelines.
- Support managers can monitor agent workload and ticket aging through dashboards.
- The application communicates with backend services via REST APIs to fetch and update ticket data in near real-time and is optimized for high-volume daily usage.

Tech Stack:

HTML5, CSS3, React JS, Tailwind CSS, REST APIs, Responsive Web Design

Roles & Responsibilities:

- Developed reusable React components for ticket creation, listing, and detailed views Integrated REST APIs to create, update, and track ticket status in real time.
- Implemented priority indicators, status badges, and conditional rendering Designed responsive layouts using Tailwind CSS for agent and manager views.
- It Managed loading states, error handling, and empty data scenarios Worked closely with backend and QA teams to validate ticket workflows

3. **Content Management System (CMS) – Admin Panel** **(Jan-26 – Apr-26)** **Team Size: 7**

Project Description:

- Developed an admin panel for managing website content such as pages, banners, and media assets.
- Content editors can create, update, and publish content through the CMS interface.
- The system communicates with backend services via REST APIs to ensure real-time content updates across the website.

Tech Stack:
HTML, CSS, React JS, Tailwind CSS, REST APIs, Responsive Web Design

Roles & Responsibilities:

- Developed content listing, editor, and publishing workflows Integrated REST APIs for content CRUD
- Operations Implemented role-based access for editors and admins Built responsive admin layouts using Tailwind CSS
- It Ensured UI consistency and usability for non-technical users

EDUCATIONAL EXPERIENCE

2021-2024	**BCA**	**Sandip University Sijoul, Madhubani**	**8.42 (CGPA)**

APPRECIATION

Recognized for developing responsive and reusable React components, improving development efficiency.

Appreciated for optimizing web performance and enhancing overall user experience.
